25X1A

As the result of [REDACTED] visit to the contractor's plant on 15-16-17 March 1965, a contract extension of approximately one month and a request for additional funding is anticipated. This is due to two minor changes suggested by the monitor: (1) expand film magazine from 16-mount capacity to 36-mount capacity; (2) change the design of the film chip input station so that the film is dropped rapidly into the developing solution rather than being carried in slowly. This will prevent over-development on that end of the film chip entering the developer first. The time extension will mean delivery about 30 April 1965. The amount of additional funding which may be requested is unknown, but is estimated to be approximately [REDACTED]
